

Design LOG

AUT 2026

mArch
bLhons

We acknowledge the Gadi People of the Eora Nation, the Boorooberongal people of the Dharug Nation, the Bidiagal people and the Gamaygal people upon whose ancestral lands we come to engage and learn.
We extend this acknowledgment to all First Nations People and Country on which we will listen and learn from. We pay respect to the Elders both past and present, acknowledging them as the traditional custodians of knowledge for these lands, waters and sky.

Sovereignty was never ceded. Always was, always will be Aboriginal land.

designLOG

The Design Log

In complement to your design deliverables and drawing set, your DESIGN LOG will demonstrate your comprehension across key considerations that you will need to be addressing in Practice.

The Design Log should be a working document throughout the semester with review touch points at every submission for feedback. Final submission will be your completed LOG.

Set up a template with the following headings and address each item as directed – you can use written responses in addition to diagrams, detail drawing and images to further explain your responses. Ensure your Design Log has your name, student number, semester (SPR 2024), Studio (number and Title), and Tutor/s listed on every page. Citation is extremely important so do ensure that for every image and quote that you are using standard APA 7th referencing. Here is a guide_

<https://www.uts.edu.au/sites/default/files/article/downloads/UTS%20Interactive%20APA%20guide.pdf>

Return Brief

300 word statement

This is your project conceptual framing, and should respond to_

PC24 Understand how to identify and evaluate project development options in response to a project brief – its objectives, budget, user intent and built purpose, risks and time-frame

As well as integrity to outcomes that consider_
Country
Sustainability + Zero net Carbon life cycle
Building and landscape systems
Biodiversity
Material use and reuse

Your return brief will evolve as you respond to the considerations in the LOG

Also list the pragmatics of the project_

Typology + program description

Area calculations
_Site Area
_Building Area
_Landscape Area – pervious + impervious
_GFA

Prepare a scheduled program for working across the semester - this can be a Gantt Chart or time line diagram of your own making

Connecting with Country

Positioning
300-word statement with visuals
Positioning, an Indigenous engagement protocol, is foundational in decolonial methodologies, and integral when working with and on Country. Western design practices assume neutrality and objectivity however Indigenous and decolonial methodologies understand where you are placed, your standpoint, your worldview. The process will require reflection to surface your values, biases, and assumptions in your (design) practices. The process should acknowledge what you bring to your research and design methodologies.

Resources
Your reference list all the First Nations resources that you have referred to.
You should privilege Indigenous perspectives and voices here.

Respectful considerations before connecting with Community
Finding out_

Ask these questions specific to the land, waters and air, which the project will connect with_

_Who has cared for Country here for millennia?
_What diverse elements make up the enduring spirit of Country here, both tangible and intangible? (Knowledges, stories, songlines, languages land, skies, waters, ecologies)
_What has Country bore witness to since colonisation, both good and bad?

Key considerations_
300 words
_What are the ways in which we can contribute positively back to Country?
_How are you designing from a Country-centred approach?
_How are you connected to Country and how are you bringing yourself to this project? This should be informed from your positioning.

How is your design considering (use a sub-head-

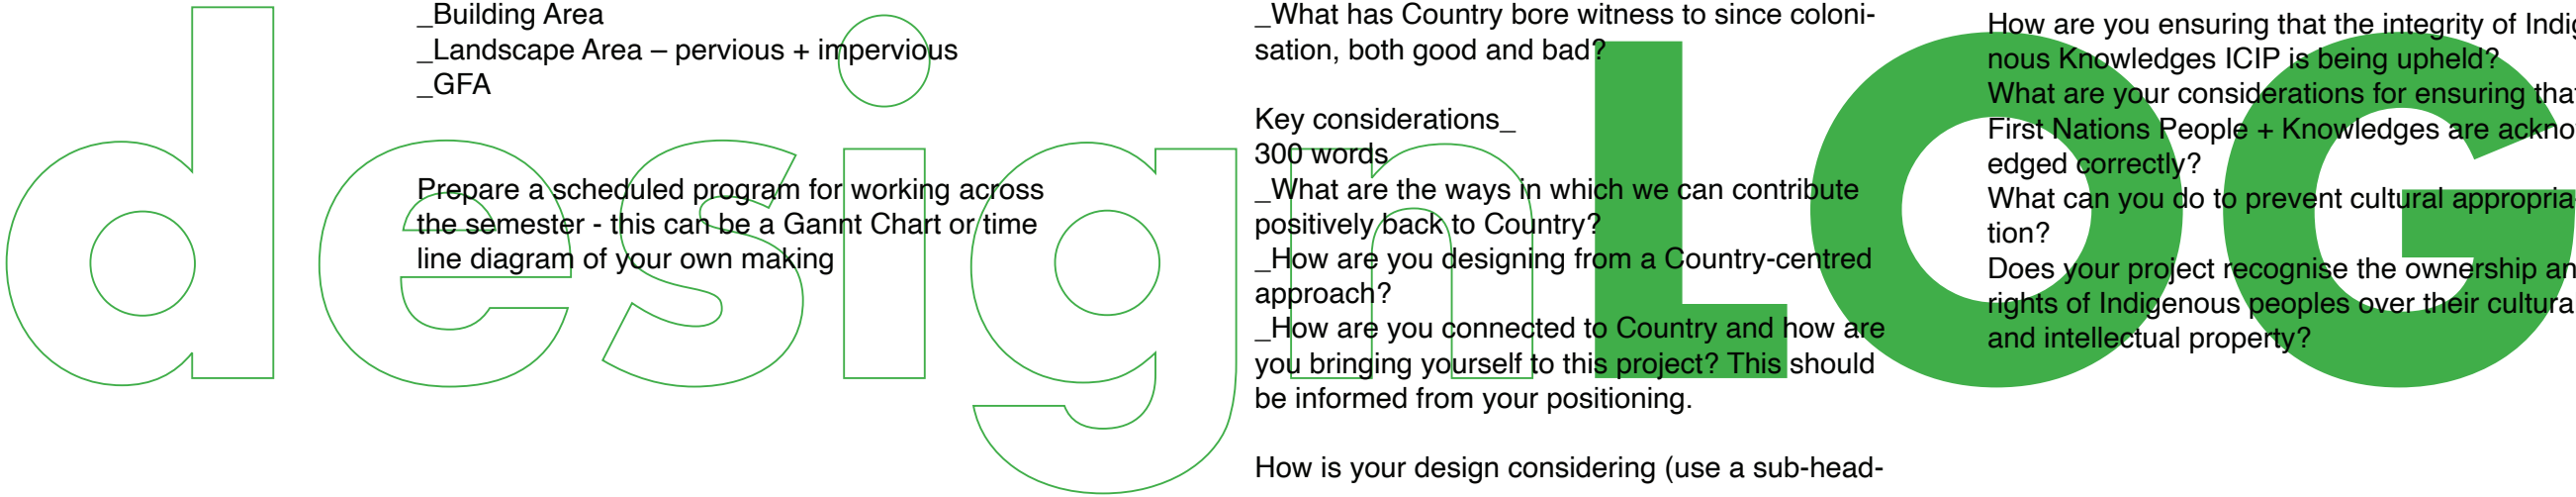

ing for each of the following) 150 words with drawings and diagrams. This should be an extension, or framing of, your site analysis_
Hydrology
Geology
Songlines
Astronomy
Materials
Ecologies + habitats
Beyond site - erasing cadastral lines, how does this impact the systems of Country, beyond the bounding box of your 'site'
Seasonality

Timeline of connection
Set-up a timeline of participation (this can be a diagram with notation) – this should include_

_Preliminary research you will need to undertake before connecting with Community. What do you need to know before you engage with Local Peoples and Traditional Owners?
_Community engagement + participatory consultancy and co-design throughout the process – when and who?
_Ongoing custodianship – how is this connection being maintained beyond project completion? Can the project provide tangible benefits to Indigenous communities, ensuring that they are not just contributors but also beneficiaries of the project? Is it appropriate for your project?

Refer to Connecting with Country – Section 3, connecting with Country Framework
Actions from pg. 44 GAO NSW

Ethics + ICIP
150 words
How are you ensuring that the integrity of Indigenous Knowledges ICIP is being upheld?
What are your considerations for ensuring that First Nations People + Knowledges are acknowledged correctly?
What can you do to prevent cultural appropriation?
Does your project recognise the ownership and rights of Indigenous peoples over their cultural and intellectual property?

Contextual analysis of
existing colonial
conditions

NCC

Whole life Carbon

Sustainability

Text, drawings, photos and diagrams can be used here

Basics_
Orientation
Sun path + Over-Shadowing
Views + sight lines
Etc.

Landscape systems analysis_
Hydrology
Soils
Vegetation

Land uses (public + private)
Transport

Material flows

Current cultural + community considerations
(which of course ALWAYS needs to consider the enduring culture of Traditional Custodians)

Building Classification
List this/these

NCC Worksheets
Include these from the IPD Sessions with Jenna Rowe

Provide a materials list matrix spreadsheet with_

_image
_sqm / cubic m / units used in the project
_source of origin
_transport
_local to Country – Y / N - if yes, what do you know of its significance
_existing fabric or new
_lifespan
_Recycled product – Y / N
Carbon calculation – using the EPIC Database (University of Melbourne), calculate the carbon
 Embodied energy
 Embodied greenhouse gas emissions
 Embodied Water

From the Advanced Sustainability IPD with Lucy Humphrey on half-carbon, calculate a 1sqm volume of your proposal, as demonstrated and instructed.

For each of the following headings provide a written statement (no more than 1page) and accompanying diagrams / images and precedents (cited)
NOTE: We need to see specific application to your project so detailed drawings need to be your own, not a generic diagram or detail taken from another source

Resilience_
Social Design to understand, support and develop social connections and a healthy community

Economic Design to support local enterprise and contribution back into the community

Considerations to Country - how is this project contributing to the ongoing sustainability of Country and Indigenous Knowledges

Active and Passive systems_
Drawings and diagrams to specifically demonstrate your scheme’s consideration to_

Biodiversity

Water storage and treatment

Energy consumption + thermal calculation, passive and active heating and cooling

Lighting + Acoustics - provide a schedule of all spaces

Ecology - what are you doing to ensure biodiversity is encouraged and considerations given to native ecologies

Sustainable Building systems – precedents can be included, ensure you cite these.

Planning Instruments

FSR
Setbacks
Envelope
Zone
Heritage Item

Legislation, Codes + Standards

Refer to local LEPs, DCPs, Biodiversity Act, Bush-fire standards, coastal policies

List all that your speculation and location are subjected to and that you are referencing.

Is this a DA or can you work to Complying or Exempt Development, for example.

Structural Systems logic

Include your mark-up with undertaken during the Structural Engineer consultation.

Detailed exploded axo of your structural system + logic

Must consider material life-cycle in the selection of your structural system selection

Landscape Architecture Students:
Show detailed drawings of the ecological structure and system that you are setting up in your design

Process – form making + Precedent

As per PC36 Be able to apply creative imagination, design precedents, research, emergent knowledge and critical evaluation in formulating and refining concept design options, including the exploration of three dimensional form and spatial quality

Show the development of your design process, through sketches, mark-ups and precedent analysis - through drawing/diagram/models

NOTE: This must include OPTIONS for your speculative proposal, such as 3(three) site planning options and iterative options of your design

Reference List

(can include journal articles, publications, video media etc)

A full reference list to be included using standard APA 7th referencing. Once again here is a guide_

<https://www.uts.edu.au/sites/default/files/article/downloads/UTS%20Interactive%20APA%20guide.pdf>

designLOG

IPD notes

Include your IPD session notes as an addendum
at the end of your LOG

design LOG
